1. Project Scope & Summary

Clean & Protect – Ranch Janitorial Division

Digital Operations Platform (Mobile + Web App)

Clean & Protect’s Ranch Janitorial Division has established a well-structured operational model built on **consistency, accountability, and proactive communication**. While the existing hierarchy and field operations ensure oversight, the reliance on manual processes limits transparency, delays communication, and impacts service consistency.

This project aims to **digitally transform** Clean & Protect’s janitorial operations through a **custom mobile and web-based application** designed to:

- Digitize daily cleaning, inspection, and feedback workflows
- Provide real-time operational visibility across all user levels
- Automate SLA-based corrective actions and reporting
- Enable seamless collaboration between field teams, operations, and client relations
- Strengthen accountability through data-backed quality scoring and follow-up verification

By leveraging the proposed **Clean & Protect App**, every role — from **Technicians to Senior Admins** — will have clear visibility, defined responsibilities, and structured communication channels. This digital transformation will bridge the current operational gaps, reduce redundant effort, and create a culture of **measurable service excellence and transparency**.

The implementation will follow a **phased rollout approach**, starting with key functional modules for internal operations, followed by client-facing portals and reporting dashboards. This ensures early enablement, feedback incorporation, and smooth adoption across all levels

2. Operations Model (As-Is)

Clean & Protect’s existing hierarchy ensures efficient coordination from the field to corporate operations.

Role	Key Responsibilities	Reports To
Technicians	Execute daily cleaning activities, follow checklists, capture photos of completed work.	Team Leads
Team Leads	Supervise on-site execution, conduct inspections, record quality scores, guide technicians.	Operations Supervisors

Operations Supervisors	Manage regional operations, ensure compliance and scheduling, monitor inspection outcomes.	Operations Admin
Operations Admin	Support supervisors, track compliance reports, manage escalations and documentation.	Senior Admin Team
Client Relations Team	Manage communication, feedback, and client satisfaction; verify corrective closures.	Senior Admin Team
Senior Admin Team	Provide corporate oversight, review performance analytics, ensure accountability and quality alignment.	Executive Management

3. Identified Challenges

Based on the client's problem statement and initial analysis, the following operational challenges were identified:

Challenge	Impact
Inconsistent service delivery across sites and shifts	Reduced reliability and variable quality outcomes
Limited transparency in field operations	Clients and management lack real-time progress visibility
Reactive problem handling	Escalations occur only after client complaints
Accountability gaps	No systematic tracking or photo-verified completion
Manual reporting and inspections	Delays in feedback loop and issue closure

4. Proposed Solution

A unified **Clean & Protect Operations App Suite** consisting of:

- 1. Field Mobile App (Technicians & Team Leads)**
 - a. Task management, inspection checklists, and photo uploads.
 - b. Real-time sync to supervisor dashboard.
- 2. Operations Web Portal (Supervisors, Admins, Senior Admins)**
 - a. End-to-end tracking, SLA dashboards, escalation matrix, and compliance logs.
- 3. Client Dashboard (Client Relations & Client Users)**
 - a. Service visibility, issue tracking, performance ratings, and closure verification

5. Functional Scope

A. User & Role Management

- Secure, role-based access control.
- Configurable privileges per user type (View, Edit, Approve, Assign).
- Users mapped to specific sites, branches, and teams

B. Task & Schedule Management

- Supervisors/Admins create daily/weekly cleaning schedules.
- Team Leads assign and monitor technician tasks.
- Technicians log task completion with checklist and photo evidence.
- Calendar and filter views for easy tracking

C. Inspection & Quality Scoring

- Team Leads conduct inspections using a standard scoring matrix (1–5).
- Any score below 4 auto-triggers a **Corrective Action Ticket**.
- Inspection proof (photos, comments) saved to the system

D. Corrective Action & SLA Workflow

- Tickets assigned automatically to responsible Technician/Team Lead.
- SLA timer (default 5 service days) begins upon creation.
- Escalation alerts at 50% and 100% of SLA period.
- SLA chain: Technician → Supervisor → Operations Admin → Senior Admin

E. Client Feedback & Rating

- Clients provide feedback per site visit with rating (1–5).
- Option to upload comments or images.
- Feedback data feeds directly into quality KPIs and dashboards.

F. Client Relations Dashboard

- View open issues and their SLA countdown.
- Log communications, mark follow-ups, and attach proof of resolution.
- Coordinate directly with operations for rapid closure

G. Reporting & Analytics

- Multi-layer dashboards for management and audit tracking.
- KPIs include:
 - Average Service Quality Score
 - SLA Adherence Rate
 - Corrective Action Turnaround Time
 - Photo-Proof Compliance %
 - Client Satisfaction Score

- Exportable reports (PDF/Excel).

H. Notifications & Alerts

- Automated alerts for SLA breaches, low scores, and pending feedback.
- Push + Email notifications for assigned tasks and escalations.

I. Audit Trail & Compliance

- Log every user action with timestamps and identifiers.
- Audit-ready logs accessible to Senior Admin and HQ.

6. Data Flow Overview

1. Field Execution Flow

Technician → completes task → uploads photo → Team Lead inspects → Supervisor verifies → Admin records completion

2. Issue Resolution Flow

Inspection (score <4) → auto ticket → assigned → corrective proof → Client verification → closure logged

3. Client Feedback Flow

Client rates service → feedback logged → Client Relations acts → issue closed → performance metrics updated

7. Reporting & KPI's

KPI	Definition	Owner
Average Quality Score	Average of inspection ratings per site/period	Operations Supervisor
SLA Compliance Rate	% of issues resolved within set SLA	Operations Admin
Client Satisfaction Index	Average of client feedback ratings	Client Relations
Photo Proof Rate	% of completed tasks with valid proof	Team Lead
Recurring Issue Frequency	% of repeated issues in last 30 days	Senior Admin

8. Implementation Phases

Phase	Focus Area	Deliverables	Users
Phase 1	Core Field Operations	Mobile app (Technician + Team	Field teams

		Lead), Task logging, Inspections	
Phase 2	Operational Oversight	Web portal with SLA & Reporting modules	Operations & Admin
Phase 3	Client Transparency	Client dashboard with rating and issue closure	Clients, Relations
Phase 4	Analytics & Expansion	KPI dashboards, audit exports, multi-branch scaling	Senior Admin & Corporate

9. Points to Consider

- Inspection templates and scoring rubrics will be provided by Clean & Protect.
- SLA period (default 5 days) configurable per client or site.
- Photo upload limited to optimized file sizes (<5MB).
- Branding (logos, colours, tone) to follow Clean & Protect's corporate identity.
- Phase 1 will focus on internal users before opening client-facing modules
